Our Problem Statement

The supply chain industry is facing numerous challenges, such as rising risks, unexpected delays, cost control, and difficulties in collaboration and data syncing. To address these issues, we needed to develop a blockchain-based supply chain network that offers transparency, product authentication, quality control, finance, and smart contracts to streamline processes and reduce costs.

Impact Of Blockchain and Use Cases

- Real-time visibility, tracking, and authentication of goods.
- Secure and tamper-proof records of product origin.
- Automating and streamlining supply chain processes through smart contracts.
- Facilitating supply chain finance. time and cost required for supply chain management.
- Improving quality control.
- Improving demand forecasting.
- Promoting responsible sourcing and reducing environmental impact.

Our Challenges

- Receiving this PS.
- Trying to learn, understand and implement blockchain for the first time and that too in one day.
- Having to start the very core Blockchain concepts from scratch.

— Supply at ease! —

Our Journey & Research

- We started to learn everything about blockchain from the basics (Our first doc).
- Understanding the concepts was easier, but executing the processes was a whole different task.
- So here we are, several youtube tutorials and several advice from our seniors later.. AND here's what we created in the last 21 hours.

Here's what Supply, Chain Se would look like....

Home Smart Contracts Track Order About Us

Supply, चैन से

Supply, चैन से...

Making the Supply Chain Easy, Safe & Tension-Free.

Our technology performs fast blockchain (120K TPS) and it will make your supply and buy journey hassle-free. We provide live tracking, smart contracts and we also decentralize process to provide utmost security. Welcome to Supply, Chain Se!
